

Security incident report

Section 1: Identify the network protocol involved in the incident

DNS. HTTP. TCP

Section 2: Document the incident

A former employee performed a brute force attack on the admin account and managed to succeed, because the password was still set to the default one. After that, he gained access to the website and inserted a malicious JavaScript file. This script prompted visitors to download and execute a malicious file. Once executed, the malware redirected users to a fake website and caused their computers to run slowly, indicating system compromise

Section 3: Recommend one remediation for brute force attacks

Enable account log in attempts limit/ Enforce stronger passwords
